

IN THE ABSTRACT

Please amend the abstract as follows:

-- ~~Method to transmit an information service in a broadcast transmission system~~

A generic information service structure is assumed and a method to transmit the information service from a server side to an unlimited number of users over a broadcast medium is provided. This ~~transmission method comprises the following steps: performing a fragmentation~~ The method includes fragmenting within each of categories representing ~~said an~~ an information service to create data fragments, ~~[[-]]~~ adding ~~signalling~~ signaling information to every data fragment, which ~~signalling~~ signaling information allows a consistent reassembly of ~~said the~~ the data fragments at a receiver ~~on basis of predefined protocol rules,~~ to create respective broadcast objects, and ~~[[-]]~~ transmitting ~~said the~~ the broadcast objects in an order according to an information content of ~~said the~~ the data fragments ~~within said broadcast object. Preferably, the~~ Preferably, said fragmentation is performed dependent on the information content of the data to be transmitted.
